Summary Statement:

The Dillingham Small Boat Harbor's current float system is the original installed float system that is 30+ years old. Historically, a rubber compound is painted on the bottom of the "float arm floats" to help keep water from penetrating through the worn bottoms. Last season, this method was ineffective, and the floats had to be pumped twice every day, this is a strain on staff time and labor some.

To increase staff efficiency, extend the floats life, and keep the Harbor in working order for this upcoming season and over the next three years. The City Council approves repairs to the four of the floats for \$28,444.61 per float. With two floats receiving repairs now and two floats receiving repairs after the season.

2023-13
