## **Platting Procedure**

### **Final Plat / Waiver Application**

Once the preliminary plat approval has been granted by the Planning Commission, the applicant has twelve (12) months from that date in which to submit the final plat application. Prior to submitting the final plat, all conditions set by the Planning Commission at the preliminary stage must be met, surveying and any required road construction of other subdivision improvements completed and approved, and the final plat prepared by a registered land surveyor licensed in Alaska.

1. The final plat application form is to be filled out by the applicant or surveyor (available from the Planning Department).
2. The appropriate final plat application fee and recording fees must be submitted with the application along with the required attachments.
3. Accompanying the final plat when submitted to the Planning Department must be a report by a registered, licensed engineer that certifies compliance with Alaska Department of Environmental Conservation regulations for domestic water supply and sewage disposal for subdivision plats.
4. As applicable, the information as listed on the sheet titled Final Plat Information (attached to the final plat application) must be submitted to the Planning Director.
